Quiz 5 results

Your quizzes were regraded Sunday

- I had selected the wrong answer to multiple choice question #19
- So it was initially marked wrong
- I caught it and had quizzes regraded
- So your score should be correct

Grades

We finally got caught up on the grading

Everything has been graded except for Classwork 10 (due tonight), Homework 10 (due Wednesday) and the final exam

I *believe* that I got the formula for calculating grades correct

- So your "weighted average" column should show your current score in the class
- I'm pleased with the grade distribution at this point - it's a little top heavy but not bad for a 100-level elective course
- 66% of the grade is in; the final, the classwork and the homework total 34% of the grade so don't get overconfident!!

Final Exam prep

So, now: about that final.

It's cumulative

- Like everything else in this class. It has to be; you're not allowed to forget what constitutes a valid variable name or that we use Linux or how to compile a program or…

There are 60 questions, worth 5 points each

- 30 multiple choice
- 15 True/False
- 15 short answer

Logistics

Final is next Monday night, May 20, 6-8 pm.

In the regular classroom

Unless you have prior permission (so far, that's 3 students) you have to be here in the lab room to take the final

On Blackboard

No outside help, talking to your neighbor, etc.

Is there a sample final?

There will be, along with a key. But I haven't finished it yet

- The test isn't until Monday; there's time
- When I get it done, the sample will be on Blackboard and the key will be posted to GitHub

So what do we study?

The sample quizzes and the quizzes

Pretty much every final exam question is modeled after one or more of those questions

Some of them may be the exact same question you've seen before, but that would be random coincidence
